INFORMATION & IMAGE MANAGEMENT SYSTEMS

Digital Video Manager

Visualise, record and distribute your events
from wherever you want

DocuDVM is a video digital manager enabling real-time or delayed visualisation, recording, distribution and exportation of any kind of event, from any place.

Streaming. from your browser, get access to real-time or stored image streaming.

Capacity. visualise, record and distribute through up to 9 simultaneous cameras.

Recording retrieval according to selected parameters by the user or according to a private list.

Motion control and camera zoom.

Recording exportation in various formats.

High definition. Select the video resolution to visualise, record and distribute.

Simultaneously. Visualise the recorded sessions while recording others.

Savings. Enables to use the existing infrastructure like cable, microphones and analogue cameras.

Thanks to DocuDVM, distribute your events to an unlimited user number. Publish your corporative information of interest to get a better marketing tool.

Record your session and create a retrieval and reference file, accessible from any place around the world and on demand.

Realise digital minutes of your meetings. You can create a recording registration of training sessions or medical and judiciary acts. Thanks to DocuDVM, you will be able to generate stored recordings on any digital support to visualise the contents.

Transfer your events to other rooms or houses, with an HD audio and video quality.

Get an easy and efficient, public and private communication with your employees, shareholders, clients and press.

Real-time reporting. DocuDVM is very efficient in visualising meeting, town traffic weather conditions, etc...

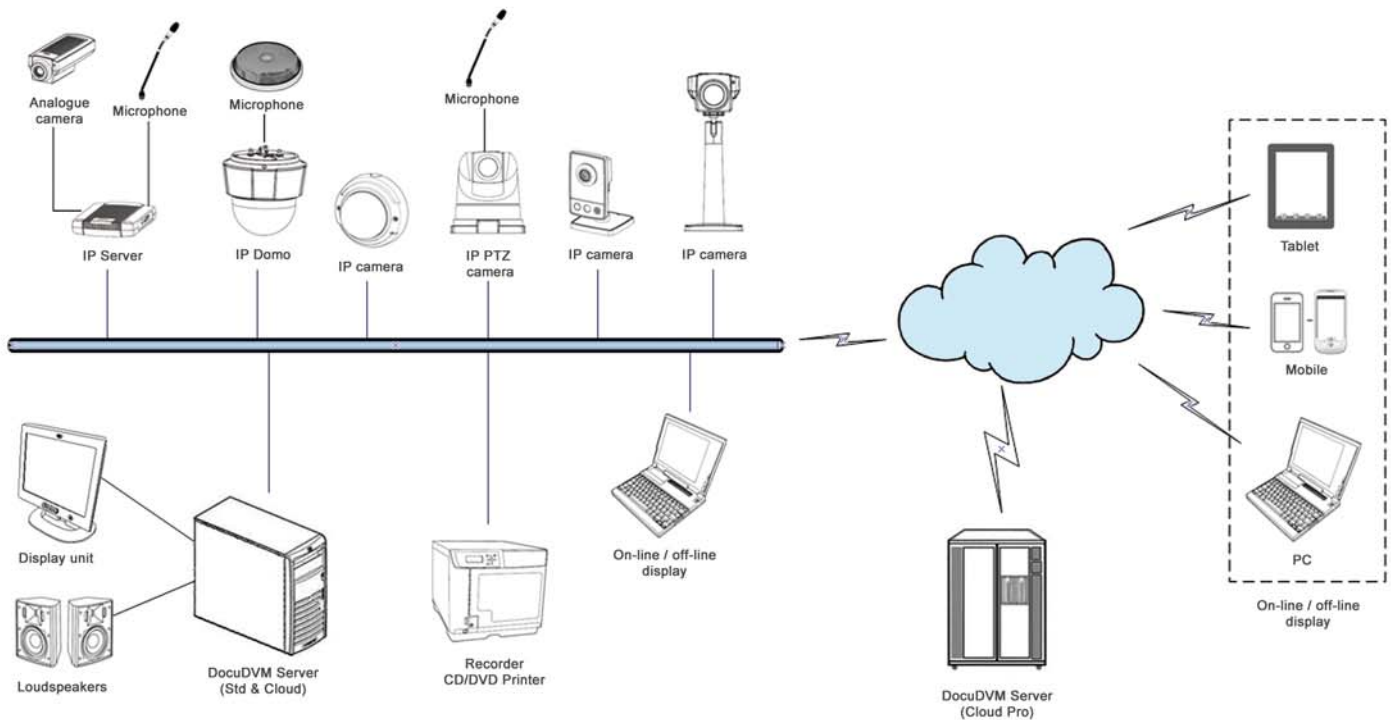

DocuDVM also adjusts to more playful options like real-time and delayed recording and streaming of (indoors and outdoors) sport events, theatre plays, musicals, ceremonies, board games, etc...
