VIDEO SURVEILLANCE AND PEOPLE COUNTING SYSTEM

DocuRemote Counter Edition is software for counting people developed by Information & Image Management Systems, S. A., integrated into the DocuRemote Pro video surveillance system.

It includes intelligent video analysis that counts the number of people crossing a virtual line or space, with a proven reliability of over 98% (complying with the established installation requirements) and can be used with 2D and 3D overhead cameras approved by I&IMS.

DocuRemote Counter Edition is a scalable solution since it allows for communication with as many devices as are necessary in different facilities.

It offers a very comprehensive occupancy control that includes all the entries, exits and the current situation in the space to be monitored. You can mark out different areas and assign a variable number of cameras. If an area has multiple access points we can establish both the overall occupancy and the maximum occupancy for each of these.

It includes a comprehensive system of alarms triggered when the maximum occupancy is exceeded, as well as the option to reset the counter at a certain time.

It offers the option to export data so that you can create additional reports and statistics.

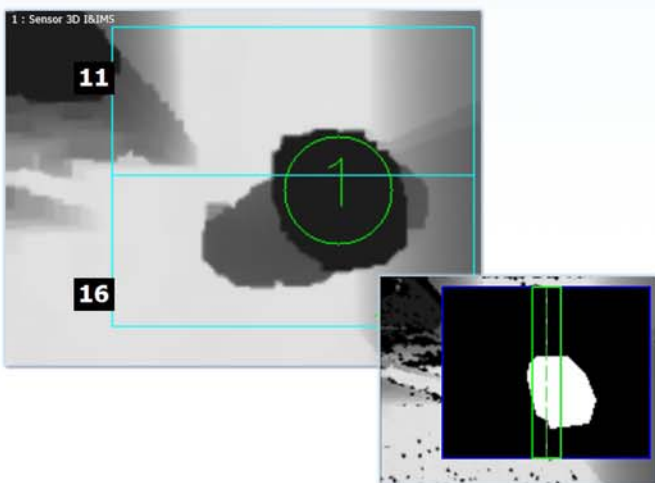

Features:

- Camera calibration (tolerance and marking off the space for the area to be counted).
- Creation of groups to mark off spaces, selection of cameras and occupancy control.
- Controls the direction of the people to count, being able to establish a counting circuit.
- Provides real-time control of the number of people present.
- Issuing of alarms in critical situations and when there are too many people in a facility.
- Current and historical occupancy statistics (intervals of ¼ hr, ½ hr, 1 hour).
- Visualisation of statistics in web format, through a compatible browser.
- Exporting of data for statistical analysis.
- Option to visualise, record and control additional IP cameras.

Range of applications:

- Points of sale.
- Department stores.
- Sports facilities.
- Leisure facilities.
- Conference rooms.
- Public buildings.
- Museums.
- Outdoor events.

Application options:

- Control of people and occupancy.
- Management of activity and customer service.
- Changes in occupancy by period (holidays, sales, etc.).
- Management of waiting areas.
- Management of mobility in spaces.
- Management of human resources.
- Reduction in energy consumption.
